## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-19 and 81-87, drawn to an apparatus for stacking sheets, classified in class 271, subclass 3.08.
- II. Claims 20-34 and 88-95, drawn to a method for stacking sheets, classified in class 414, subclass 800.
- III. Claims 35-56, drawn to a controller, classified in class 318, subclass 3.
- IV. Claims 57-77, drawn to programming controller, classified in class 700, subclass 1.
- V. Claims 96-108, drawn to a conveyor, classified in class 198, subclass 570.
- VI. Claims 109-118, drawn to a method of conveying, classified in class 198, subclass 617.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II; III and IV; V and VI are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the sheets can be stacked by hand; the program can be used in other applications; and the conveyance can be done by hand.

Art Unit: 3652

Inventions I and III; and I and V are related as combination and subcombination.

Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the stacker can stack without a controller; and the stacker can stack without having a conveyor. The subcombination has separate utility such as controlling the timing sequences of a destacker; and conveying items on an assembly line.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
